6BJ3

COMPACTRON DIODE
FOR TV DAMPING DIODE APPLICATIONS

DESCRIPTION AND RATING

The 6BJ3 is a compactron containing a single heater-cathode type diode. It is intended for service as the damping diode in the horizontal-deflection circuit of television receivers.

GENERAL

ELECTRICAL
Cathode - Coated Unipotential

Heater Characteristics and Ratings
Heater Voltage, AC or DC* . 6.3±0.6 Volts
Heater Current† . . . . . . 1.2 Amperes
Direct Interelectrode Capacitances, approximate‡
  Cathode to Plate and Heater:
    k to (p + h) . . . . . . 8.0 pf
  Plate to Cathode and Heater:
    p to (k + h) . . . . . . 5.5 pf
  Heater to Cathode: (h to k) . . 2.7 pf

MECHANICAL
Operating Position - Any
Envelope - T-9, Glass
Base - E12-70, Button 12-Pin
Outline Drawing - EIA 9-59
  Maximum Diameter . . . . . 1.188 Inches
  Maximum Over-all Length . . 2.625 Inches
  Maximum Seated Height . . 2.250 Inches

MAXIMUM RATINGS

Design-Maximum ratings are limiting values of operating and environmental conditions applicable to a bogey electron tube of a specified type as defined by its published data and should not be exceeded under the worst probable conditions.

The tube manufacturer chooses these values to provide acceptable serviceability of the tube, making allowance for the effects of changes in operating conditions due to variations in the characteristics of the tube under consideration.

The equipment manufacturer should design so that initially and throughout life no design-maximum value for the intended service is exceeded with a bogey tube under the worst probable operating conditions with respect to supply-voltage variation, equipment component variation, equipment control adjustment, load variation, signal variation, environmental conditions, and variations in the characteristics of all other electron devices in the equipment.

PHYSICAL DIMENSIONS

-terminal Connections
Pin 1 - Heater
Pin 2 - No Connection
Pin 3 - No Connection
Pin 4 - Plate
§Pin 5 - No Connection
§Pin 6 - No Connection
Pin 7 - Cathode

**FOOTNOTES**

* The equipment designer should design the equipment so that heater voltage is centered at the specified bogey value, with heater supply variations restricted to maintain heater voltage within the specified tolerance.

† Heater current of a bogey tube at $E_f = 6.3$ volts.

‡ Without external shield.

§ Socket terminals 5, 6, 8, and 9 should not be used as tie points.

¶ For operation in a 525-line, 30-frame television system as described in "Standards of Good Engineering Practice Concerning Television Broadcast Stations", Federal Communications Commission. The duty cycle of the voltage pulse must not exceed 15 percent of one scanning cycle.

---

The tubes and arrangements disclosed herein may be covered by patents of General Electric Company or others. Neither the disclosure of any information herein nor the sale of tubes by General Electric Company conveys any license under patent claims covering combinations of tubes with other devices or elements. In the absence of an express written agreement to the contrary, General Electric Company assumes no liability for patent infringement arising out of any use of the tubes with other devices or elements by any purchaser of tubes or others.
