**NOTES:**

1. The product of the Anode No. 2 Voltage and the Average Anode No. 2 Current should be limited to 6.0 watts.
2. Visual extinction of undeflected focused spot.

**NOTES: (Cont'd)**

3. Measured in accordance with MIL-E-1.
4. Using a raster size of  $2\frac{1}{4} \times 1\frac{1}{2}$  inches.
5. Using a No. 594 Photronic cell with Viscor filter (for eye correction).
6. Using a No. 594 Photronic cell without Viscor filter (without eye correction).
7. All edges of a raster, pattern adjusted so its widest points just touch the sides of 2.295 x 1.530 inch rectangle, will fall within the area bounded by the 2.295 x 1.530 inch rectangle and an inscribed 2.205 x 1.470 inch rectangle.
8. With the tube shielded and with all deflection plates connected to Anode No. 2. Limit square centered on tube face, sides parallel to deflection axes.
9. It is recommended that the deflecting electrode circuit resistances be approximately equal.

**WARNING:**

*X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.*
